1 Introduction

1.1 Introduction

This report contains the findings for Glasgow East from a research study on health and wellbeing carried out in 2008 on behalf of NHS Greater Glasgow and Clyde. The fieldwork and data entry was performed by MRUK. Analysis and reporting was performed by Traci Leven Research. It is the fourth in a series of studies conducted by the former NHS Greater Glasgow and the first to include the area administered by the newly formed NHS Greater Glasgow and Clyde.

Background

The health and wellbeing study started in 1999. At that time the aim of the study was:

- to provide intelligence to inform the health promotion directorate;
- to explore the different experience of health and wellbeing in our most deprived communities\(^1\) compared to other areas; and
- to provide information that would be useful for monitoring health promotion interventions.

There have been many policy changes over the decade the health and wellbeing study has been in operation. For example, the dissolution of social inclusion partnership areas (SIPs) as a focus of tackling area based deprivation and the emergence of the Scottish Index of Multiple Deprivation (SIMD) as the main tool for measuring area based deprivation and focusing of resources; the emergence of Community Health (and Care) Partnerships as a vehicle for integrated planning and delivery of health (and social) care services at a local level and changes to the performance assessment framework have led to an increased focus on some health behaviours such as breastfeeding; use of alcohol; diet and exercise.

The health and wellbeing survey was formed around core questions which have remained the same and allow the monitoring of trends over time. However, the survey has also been adapted over time to take into account new health and wellbeing issues and new geographies.

The survey provides a snapshot in time of the views and experience of the resident adult population. Whilst we cannot attribute causal relationships between the findings and the changing policy context we can explore our findings alongside wider changes in NHS Greater Glasgow and Clyde (NHSGGC).

Our local survey has provided flexible options to explore health and wellbeing at a local level. In 2008 each of the CH(C)Ps bought into the survey. Separate reports are available for each of the CH(C)Ps that comprise NHSGGC. In addition, Glasgow South West, Inverclyde and Renfrewshire bought into the survey at enhanced levels to allow for local exploration between the most deprived areas and other areas. Trends are available for the area administered by the former NHSGG area. All the reports will be posted on http://www.phru.net as they become available.

\(^1\) In 1999, our most deprived communities were given additional resources with the aim of reducing the gap between deprived and least deprived areas. The initiative was part of an umbrella programme of support which focused on Social Inclusion Partnership areas.
Thanks are due to the working group that led the survey:

Allan Boyd   Senior Analyst
Norma Greenwood  Head of Public Health Resource Unit
Margaret McGranachan Information and Research Manager
Julie Truman   Senior Researcher

In addition the project benefited from the support and advice of the advisory group:

Nichola Brown   Glasgow South East, CHCP
Lara Calder   South Lanarkshire CHP (formerly)
Susan Coull   Glasgow South West CHCP (formerly)
Heather Cunningham  Renfrewshire CHP
Linda de Caestecker  NHS Greater Glasgow and Clyde
James Egan   Glasgow East, CHCP
Suzanne Glennie  Glasgow North, CHCP
Liz Holms   East Renfrewshire CHCP
Russell Jones   Glasgow Centre for Population Health
Irene Mackenzie  Corporate Inequalities Team
Kathleen McGill East Dunbartonshire CHP
Clare McGinley  West Dunbartonshire CHP
Karen McNiven   Glasgow South West CHCP
David Radford  East Dunbartonshire CHP
Uzma Rehman   Glasgow West CHCP
Janice Scouller Glasgow East CHCP (formerly)
John Thomson   Glasgow North, CHCP
Greg Usrey   Glasgow South West CHCP (formerly)
Clare Walker   Renfrewshire CHP
Helen Watson  Inverclyde CHP

Objectives

The objectives of the study are:

• to continue to monitor the core health indicators
• to determine whether the changes found in the first two follow-ups were the beginning of a trend in the NHSGG area
• to compare attitudes and behaviour of those living in the bottom 15% SIMD areas and other areas and address whether changes in attitudes and behaviour apply across the board or just in the most deprived/o ther areas, thereby tracking progress towards reducing health inequalities
• to form a baseline of health and wellbeing measures for NHSGGC
• to provide intelligence for health improvement policy, programmes and information to enhance performance management.

Summary of Methodology

In total, 8,278 face-to-face, in-home interviews were conducted with adults (aged 16 or over) in the NHSGGC area. The fieldwork was conducted between mid August and mid December 2008. The response rate for all in-scope attempted contacts was 70%.

The sample was stratified proportionately by local authority and SIMD quintile (for definition of SIMD see section 1.2), with addresses selected at random from the residential postcode address file within each stratum. Adults were randomly selected within each sampled household using the last birthday technique.

A full account of the sampling procedures, fieldwork and survey response can be found in Appendix A. The survey questionnaire is in Appendix D.
1.2 Sample Profile

There were 585 interviews conducted in Glasgow East as part of the survey.

Data were weighted to account for under/over representation of groups within the sample to ensure the 2008 sample was as representative as possible of the adult population in the Greater Glasgow & Clyde NHS Board area. A full explanation of the weighting method and the data sources used can be found in Appendix B. The breakdown of the final weighted dataset for the 585 Glasgow East interviews - and how this compares with the known population profile - is shown in Table 1.1.

The Scottish Index of Multiple Deprivation (SIMD) 2006 is a relative measure of deprivation used to identify the most deprived areas in Scotland. It is constructed using 37 indicators within 7 ‘domains’ (Income, Employment, Health, Education, Skills & Training, Geographic Access, Housing and Crime) each of which describes a specific aspect of deprivation. The SIMD is a weighted combination of these domains.

The SIMD is based on small geographical areas called datazones. The average population of a datazone is 750 and unlike previous deprivation measures, which were based on much larger geographies (e.g. postcode sectors, average population 5,000), they enable the identification of small pockets of deprivation. In order to compare the most deprived small areas with other cut-off points, the most deprived 15% datazones are used. There are 6,505 datazones in Scotland. They are ranked from 1 (most deprived) to 6,505 (least deprived). The NHSGGC area contains the most deprived datazone in Scotland and in total 48% of the most deprived 15% datazones in Scotland lie within it.

1.3 This Report

Chapters 2-6 report on all the survey findings, with each subject chapter containing its own summary. For each indicator, tables are presented showing the proportion of the sample which met the criteria, with comparisons with the NHS Greater Glasgow & Clyde (NHSGGC)
area as a whole, and break-downs by demographic (independent) variables. Only comparisons with NHSGGC and independent variables which were found to be significantly different (p<0.05) are reported. The independent variables which were tested were:

- Gender; and
- Age group (16-44; 45-64; 65+).

Chapter 7 provides a summary of the differences for the findings for Glasgow East compared to the NHSGGC area as a whole.

Chapter 8 provides information on trends across the last two health and wellbeing surveys in Glasgow East (2005 and 2008).
2 People’s Perceptions of Their Health & Illness

2.1 Chapter Summary

Table 2.1 below shows the indicators relating to perceptions of health and illness.

</table>

Two in three (67%) respondents had a positive view of their general health. Those aged 65 or over and women were less likely to have a positive view of their health.

Three in four (77%) had a positive view of their general physical wellbeing. Those aged 65 or over and women were less likely to do so.

Four in five (82%) had a positive perception of their mental or emotional wellbeing. Those aged 65 or over were less likely to do so.

More than four in five (85%) had a positive perception of their happiness.

Two in three (68%) respondents definitely felt in control of the decisions affecting their daily life.

More than four in five (83%) had a positive perception of their quality of life. Those aged 65 or over and women were less likely to do so.

One in six (18%) respondents had a long term limiting condition or illness. Those aged 65 or over were more likely to have such a condition/illness.

A third (34%) of respondents were receiving treatment for at least one condition or illness.

One in ten (10%) respondents had a high GHQ12 score indicating poor mental health. Those aged 45 or over and women were more likely to have a high GHQ12 score.
Just under nine in ten (87%) respondents had at least some of their natural teeth. Those aged 65 or over were less likely to do so.

Four in five (83%) of those with at least some of their natural teeth brushed their teeth at least twice a day. Those aged 65 or over and men were less likely to do so.

2.2 Self-Perceived Health and Wellbeing

General Health

Respondents were asked to describe their general health over the last year on a four point scale (excellent, good, fair or poor). Overall, two thirds (67%) gave a positive view of their health, with 13% saying their health was excellent and 54% saying their health was good. However, 33% gave a negative view of their health, with 21% saying their health was fair and 12% saying it was poor.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in Glasgow City or the NHSGGC area as a whole to have a positive perception of their general health (67% Glasgow East; 71% NHSGGC)

Figure 2.1: Self-Perceived General Health: Glasgow East, Glasgow City and NHSGGC

As Table 2.2 shows, those aged 65 or over were less likely to have positive views of their general health, and those aged under 45 were the most likely to do so. Men were more likely than women to have a positive view of their general health.

Physical Wellbeing

Respondents were presented with a 7-point ‘faces’ scale, with the expressions on the faces ranging from very happy to very unhappy:

![Faces Scale]

Using this scale, they were asked to rate their general physical well-being and general mental or emotional well-being. Those selecting any of the three ‘smiling’ faces (1-3) were categorised as having a positive perception.

Three in four (77%) respondents gave a positive view of their physical wellbeing, using this scale.

Comparison with Glasgow City NHS Greater Glasgow & Clyde Area

Compared to those in Glasgow City and in the NHSGGC area as a whole, those in Glasgow East were less likely to have a positive view of their physical wellbeing.
Table 2.3 shows those under the age of 45 were more likely to have a positive perception of their physical wellbeing and men were more likely than women to do so.

**Table 2.3: Positive Perception of Physical Wellbeing (Q53b) by Age and Gender**

<td>585</td>
</tr>
</tbody>
</table>

Respondents were also asked to use the ‘faces’ scale to indicate how happy they are, taking everything into account. In total 85% of respondents gave a positive view of their happiness.

**Feeling in Control of Decisions Affecting Life**

Respondents were asked whether they feel in control of decisions that affect their life, such as planning their budget, moving house or changing job. Two in three (68%) said that they ‘definitely’ feel in control of these decisions, while 28% said that they felt in control ‘to some extent’ and 4% did not feel in control of these decisions.

**2.3 Self Perceived Quality of Life**

Using the ‘faces’ scale, respondents were asked to rate their overall quality of life. Overall, 83% of respondents gave a positive rating of their quality of life.

**Comparison with NHS Greater Glasgow & Clyde**

Those in Glasgow East were less likely than those in the NHSGGC area as a whole to have a positive rating of their quality of life (83% Glasgow East; 86% NHSGGC).
Those aged under 45 were the most likely to have a positive perception of their quality of life and those aged 65 or over were the least likely. Men were more likely than women to have a positive view of their quality of life.

2.4 Illness

One in six (18%) respondents said that they had a long-term condition or illness that substantially interfered with their day to day activities.

The likelihood of having a limiting condition or illness increased with age from 5% of those aged 16-44 to 34% of those aged 65 or over.

Illnesses/Conditions for Which Treatment is Being Received

A third (34%) of respondents were receiving treatment for at least one illness or condition.

The likelihood of being in receipt of treatment for at least one illness/condition rose with age – from 13% of those aged 16-44 to 67% of those aged 65 or over. Women were more likely than men to be receiving treatment. This is shown in Table 2.7.

Figure 2.5 below shows the proportion of respondents who were being treated for each type of illness/condition (for all those with a proportion of 0.5% or more).

The most common condition being treated was arthritis/rheumatism/painful joints, for which 12% of respondents were being treated. Also, 10% of respondents were being treated for high blood pressure.
Figure 2.5: Conditions/Illnesses for Which Treatment is Being Received (Q2)

Comparison with NHS Greater Glasgow & Clyde Area

Compared to those in the NHSGGC area as a whole, those in Glasgow East were less likely to be receiving treatment for coronary heart disease, but more likely to be receiving treatment for diabetes. This is shown in Figure 2.6.
2.5 Mental Health

GHQ12 Scores

The survey used the General Health Questionnaire (GHQ) to assess the mental health of respondents. The GHQ was designed to be a self-administered questionnaire which could be used to detect psychiatric disorders in the general population. The version used for this survey is based on twelve questions (GHQ12) which ask respondents about their general level of happiness, depression, anxiety, self-confidence, and stress in the few weeks before the interview. Respondents were asked to complete the responses themselves.Interviewers recorded whether they actually did so, or whether they asked the interviewer to help.

Each respondent was given a score between 0 and 12, based on his/her responses to the 12 questions. The number of questions for which the respondent claimed to have experienced a particular symptom or type of behaviour ‘more than usual’ or ‘much more than usual’ over the past few weeks is counted, and the total is the score for that person. The higher the score, the greater the likelihood that the respondent has a psychiatric disorder.

The questions on the GHQ12 ask about changes from normal functioning but not about how long those changes have persisted. As a result, the GHQ detects psychiatric disorders of a range of durations, including those that may be of very short duration. This should be borne in mind when interpreting the results. The prevalence figures presented in this chapter estimate the percentages of the population with a possible psychiatric disorder at a particular point in time and are most useful for comparing sub-groups within the population. It is not possible to deduce the incidence of psychiatric disorders from these data.

A score of four or more on the GHQ12 has been used to identify those with a potential psychiatric disorder (and references to respondents with a ‘high’ GHQ12 score refer to those with scores at this level). This is the same method of scoring that is used in the Scottish Health Survey series.

Overall, 10% of respondents had a GHQ12 score of four or more, indicating poor mental health.
Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in the NHSGCC area as a whole to have a high GHQ12 score. This is shown in Figure 2.7.

**Figure 2.7: High GHQ12 Score: Glasgow East and NHSGGC**

![Chart showing GHQ12 scores for Glasgow East and NHSGGC](chart)

Those aged under 45 were less likely than older respondents to have a high GHQ12 score. Women were more likely than men to have a high GHQ12 score.

**Warwick-Edinburgh Mental Wellbeing Scale (WEMWBS) Scores**

The survey also used the Warwick-Edinburgh Mental Wellbeing Scale (WEMWBS) to assess positive mental health (mental wellbeing). This uses 14 positively worded questions. Scores are derived by summing responses to each of the 14 questions on a 1-5 likert scale. Thus, the maximum score is 70 and the minimum score is 14. The scale is designed to allow the measurement of mean scores in population samples. The provisional mean score for the Scottish population is 50.7.

The overall mean WEMWBS score for respondents in Glasgow East was 50.7.

Those under the age of 45 tended to have higher WEMWBS scores, indicating better mental wellbeing. Men tended to have higher WEMWBS scores than women.
2.6 Oral Health

Proportion of Own Teeth

Respondents were asked what proportion of their teeth were their own. Just under nine in ten (87%) respondents said that they had all (52%) or some (35%) of their own teeth, while 13% had none of their own teeth.

The national target is for no more than 5% of 45-54 year olds to have none of their natural teeth by 2010. Responses indicate that this target is already met in Glasgow East, with 2% of 45-54 year olds having no natural teeth.

The proportion who had all or some of their natural teeth ranged from 50% of those aged 65 or over to 99% of those aged under 45.

Frequency of Brushing Teeth

Those with at least some of their own teeth were asked how often they brushed their teeth. In total 83% said they brushed their teeth at least twice a day.
Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were more likely than those in the NHSGGC area as a whole to brush their teeth twice or more per day (83% Glasgow East; 79% NHSGGC).

**Figure 2.8: Whether Brush Teeth Twice or More Per Day: Glasgow East and NHSGGC (all those with at least some of their own teeth)**

Those aged 65 or over were less likely to brush their teeth at least twice a day. Women were more likely than men to brush their teeth at least twice a day. This is shown in Table 2.11.

**Table 2.11: Brushes Teeth Twice or More Per Day (Q13) by Age and Gender**

</table>

Just under nine in ten (86%) respondents had seen a GP at least once in the last year. Those aged 45 or over and women were more likely to have done so.

One in seven (15%) had visited hospital to see a doctor as an outpatient in the last year. Those aged 65 or over and women were more likely to have done so.

One in seventeen (6%) had visited accident and emergency in the last year. Women were more likely to have done so.

One in eleven (9%) respondents had been admitted to hospital in the last year.

One in seven (14%) had contacted NHS24 in the last year. Women were more likely to have done so.

One in seventeen (6%) had used the GP out of hours service in the last year.

Half (50%) of respondents had seen a dentist within the last six months. Those aged 65 or over and men were less likely to have done so.

Seven in ten (71%) were registered with a dentist. Those aged 65 or over were less likely to be registered with a dentist.

One in fifteen (7%) had difficulty reaching hospital for an appointment. Those aged 65 or over were more likely to find this difficult.

One in ten (10%) had difficulty getting a GP appointment. Those aged under 45 were more likely to find this difficult.
One in fifteen (7%) had difficulty getting a hospital appointment. Those aged under 45 were more likely to find this difficult.

One in 28 (4%) had difficulty getting a GP consultation within 48 hours when needed.

One in 40 (2.5%) had difficulty accessing health services in an emergency.

One in 15 (7%) had difficulty getting an appointment with the dentist. Those aged under 65 were more likely to find this difficult.

One in 66 (1.5%) said that someone in their home had suffered an accidental injury in the home in the last year.

### 3.2 Use of Specific Health Services

#### General Practitioners (GPs)

Overall, 86% of respondents had seen a GP at least once in the last year. Of those who had visited a GP, half (49%) had visited the GP either once (26%) or twice (23%) in the last year. The mean number of GP visits was 4.54.

#### Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to have seen a GP in the last year.

![Figure 3.1: Whether Seen a GP in the Last Year: Glasgow East, Glasgow City and NHSGGC](image)

Table 3.2 shows that those aged 45 or over were more likely to have seen a GP in the last year. Women were more likely than men to have seen a GP in the last year.
Table 3.2: Seen GP at Least Once (Q6a) by Age and Gender

Other Uses of GP Surgery

Figure 3.2 shows the extent of other uses of GP surgeries in the last year. In addition to the 86% of respondents who had seen a GP in the last year, 33% had seen a nurse or midwife from the GP surgery (mean number of visits was 3.91) and 9% had seen staff such as physiotherapist, chiropodist, dietician, occupational therapist or clinical psychologist (mean number of visits was 3.08). Also, 4% had seen some other type of staff at a GP surgery (mean number of visits was 2.52).

Figure 3.2: Seen Specific GP Practice Staff in Last Year (Q6)

Outpatients

One in seven (15%) respondents had visited a hospital outpatient department to see a doctor at least once in the last year. Of those who had made such a visit, the average number of outpatient visits in the last year was 2.87.

Comparison with NHS Greater Glasgow & Clyde Area

Compared to those in the NHSGGC area as a whole, those in Glasgow East were less likely to have visited hospital as an outpatient.
Those aged under 45 were the least likely to have been a hospital outpatient in the last year and those aged 65 or over were the most likely. Women were more likely than men to have been hospital outpatients.

### Table 3.3: Visited Doctor at Hospital Outpatient Department in Last Year (Q7d) by Age and Gender

### Accident and Emergency

One in 17 (6%) respondents had been to accident and emergency in the last year. Of those who had visited accident and emergency, 82% had been once in the last year and the mean number of visits was 1.22.

### Comparison with NHS Greater Glasgow & Clyde Area

Those in East Glasgow were less likely than those in the NHSGGC area as a whole to have visited A&E in the last year.
Table 3.4 shows that women were more likely than men to have visited accident and emergency in the last year.

**Table 3.4: Visited Accident & Emergency in Last Year (Q7d) by Gender**

**Hospital Admissions**

One in eleven (9%) respondents had been admitted to hospital at least once in the last year. Of those who had been admitted to hospital, 75% had been admitted once in the last year, and the mean number of admissions was 1.74.

**Use of Pharmacy for Health Advice**

One in four (25%) respondents had seen a pharmacist for health advice in the last year. Of those who had done so, 45% had done so only once, and the mean number of visits to the pharmacist was 1.86.

**Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area**

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to have visited a pharmacist for health advice in the last year (25% Glasgow East; 16% Glasgow City; 17% NHSGGC).
Contacting NHS24

One in seven (14%) respondents had contacted NHS24 at least once in the last year. Of those who had contacted NHS24, 79% had done so just once, and the mean number of contacts was 1.42.

Table 3.5: Contacted NHS24 in Last Year (Q7b) by Gender

</tbody>
</table>

Use of GP Out of Hours Service

One in 17 (6%) respondents had used the GP out of hours service (GEMS) in the last year. Of those who had used the service, the mean number of visits was 1.87.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were more likely than those in Glasgow City or the NHSGCC area as a whole to have used the GP out of hours service in the last year (6% Glasgow East; 3% Glasgow City; 3% NHSGGC).

3.3 Dental Services

Frequency of Visits to the Dentist

Of those who were able to say when they last visited the dentist, half (50%) said that they had visited the dentist within the last six months, 32% had visited the dentist between six and 15 months ago, and 18% had last visited the dentist over 15 months ago.
Comparison with NHS Greater Glasgow & Clyde Area

As Figure 3.6 shows, those in Glasgow East were more likely than those in Glasgow City as a whole to have visited the dentist within the last six months, and more likely than those in the NHSGGC area as a whole to have visited the dentist within the last 15 months.

Figure 3.6: When Last Visited Dentist: Glasgow East, Glasgow City and NHSGGC

Those aged 65 or over were less likely to have visited the dentist within the last six months and more likely to have last visited more than 15 months ago. Women were more likely than men to have seen a dentist in the last six months.

Table 3.6: When Last Visited the Dentist (Q11) by Age and Gender

Registration with a Dentist

Seven in ten (71%) respondents said they were registered with a dentist. Of those who were registered with a dentist, 91% received NHS treatment while 9% received private treatment.

Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in the NHS Greater Glasgow and Clyde area as a whole to be registered with a dentist (71% Glasgow East; 75% NHSGGC).
Those aged 65 or over were less likely to be registered with a dentist. This is shown in Table 3.7.

3.4 Involvement in Decisions Affecting Health Service Delivery

Information about Condition or Treatment

Of those who had accessed any health services over the last year, 50% felt that they had ‘definitely’ been given adequate information about their condition or treatment, 47% felt that they had ‘to some extent’, and 3% felt that they had not.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in Glasgow City or the NHSGGC area as a whole to feel they had definitely been given adequate information about their condition or treatment. This is shown in Figure 3.8.
Encouragement to Participate in Decisions Affecting Health or Treatment

Four in five (81%) of those who had used health services in the last year felt that they had been encouraged to participate in decisions affecting their health or treatment either definitely (40%) or to some extent (41%).

Having a Say in How Health Services are Delivered

Three in four (75%) of those who had used health services in the last year felt that they had had a say in how these services are delivered, either definitely (29%) or to some extent (46%).

Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were more likely than those in the NHSGGC area as a whole to feel that they had a say in how health services are delivered.
Figure 3.9: Have a Say in How Health Services are Delivered: Glasgow East and NHSGGC

Feel that Views and Circumstances are Understood and Valued

Of those who had used health services in the last year, 87% felt that their views and circumstances were understood and valued, either definitely (39%) or to some extent (48%).

3.5 Accessing Health Services

Respondents were asked on a scale of 1 to 5, (1 being ‘very difficult’ and 5 being ‘very easy’) how easy or difficult it was to access a number of specific health services. The tables in this section have categorised responses so that 1 and 2 are ‘difficult’, 3 is ‘neither difficult nor easy’, and 4 and 5 are ‘easy’.

Traveling to Hospital for an Appointment

Four in five (80%) respondents indicated that they found it easy to travel to hospital for an appointment, while 13% found it neither difficult nor easy and 7% found it difficult.

Those aged 65 or over were less likely to find it easy to travel to hospital for an appointment.

Table 3.8: Difficulty/Ease of Travelling to Hospital for Appointment (Q14d) by Age

<tr>
<td>More than 1 of the following 5 ‘unhealthy’ behaviours: smoking, BMI of 25+, not meeting recommended levels of physical activity, not meeting the recommended fruit/veg consumption, binge drinking</td>
<td>81.1%</td>
<td>492</td>
</tr>
<tr>
<td>More than 1 of the following 5 ‘healthy’ behaviours: non-smoker, within normal BMI range (18.5-24.99), meet the physical activity recommendations, eat 5 or more portions of fruit/veg per day, drink within safe limits/not at all</td>
<td>79.8%</td>
<td>435</td>
</tr>
</tbody>
</table>

Half (52%) of respondents were exposed to second hand smoke most or some of the time. Those aged 45-64 were more likely to be exposed to second hand smoke.

Two in five (41%) respondents were smokers. Those aged 45-64 and men were more likely to be smokers. More than half (54%) of smokers were heavily addicted (smoking 20 or more cigarettes per day).
One in five (19%) respondents exceeded the recommended weekly limit for alcohol consumption. This equates to 46% of those who drank alcohol in the previous week. Those aged under 65 and men were more likely to exceed their recommended weekly limit.

Three in ten (30%) respondents had been binge drinkers in the previous week. This equates to 70% of those who drank alcohol in the previous week. Those aged under 45 and men were more likely to have been binge drinkers.

A third (34%) of respondents met the target for physical activity. Those aged 65 or over and women were less likely to meet this target.

A third (34%) of respondents had participated in at least one sport in the previous week. Those aged 65 or over were less likely to have done so.

Three in ten (30%) respondents met the target of consuming five or more portions of fruit/vegetables per day. Men were less likely to do so.

Three in four (73%) respondents ate breakfast every day. Those aged under 45 and men were less likely to do so.

One in nine (11%) met the target of consuming two or more portions of oily fish per week.

Two in five (42%) respondents exceeded the recommended limit of one high fat/sugary snack per day.

One in twelve (8%) met the target of consuming five or more slices (or equivalent) of bread per day. Those aged 65 or over and women were less likely to meet this target.

One in four (25%) respondents ate fast food takeaways at least once a week. Those aged under 45 and men were more likely to do so.

Half (50%) of respondents had a body mass index which indicated that they were over their ideal weight, and 20% were obese. Those aged 45-64 were more likely to be obese.

4.2 Smoking

Exposure to Second Hand Smoke

Respondents were asked how often they were in places where there is smoke from other people smoking tobacco. Half (52%) said that this happened most of the time (26%) or some of the time (26%). A further 19% said that they were seldom exposed to second hand smoke and 30% said that they never were.

Comparison with Glasgow City and NHSGGC

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to say they were exposed to second hand smoke most or some of the time (52% Glasgow East; 41% Glasgow City; 39% NHSGGC).
Those aged 45-64 were the most likely to be exposed to second hand smoke most or some of the time.

**Smokers**

Two in five (41%) of respondents were smokers, smoking either every day (34%) or some days (6%).

**Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area**

Those in Glasgow East were more likely than those in Glasgow City or the NHSGCC area as a whole to be smokers.
Those aged 45-64 were most likely to be smokers. Men were more likely than women to be smokers. This is shown in Table 4.3.

**Heavily Addicted Smokers**

Among smokers, the mean number of cigarettes smoked per day was 19.0. Just over half (54%) of smokers were ‘heavily addicted smokers’ i.e. smoking 20 or more cigarettes per day.

Among smokers, those in Glasgow East were more likely than those in Glasgow City and the NHSGGC area as a whole to be heavily addicted (54% Glasgow East; 47% Glasgow City; 47% NHSGGC).

**Intention to Stop Smoking**

Just over a quarter (28%) of smokers said that they intend to stop smoking. Heavy smokers were less likely than other smokers to say that they intend to stop smoking (22% heavy smokers; 37% other smokers).
### 4.3 Drinking

#### Frequency of Drinking Alcohol

A third (32%) of respondents said that they never drank alcohol, 36% drank alcohol sometimes (but less than weekly) and 32% drank alcohol at least once a week (including 3% who drank alcohol on three or more days per week).

#### Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in Glasgow City or the NHSGCC area as a whole to say that they never drank alcohol.

#### Figure 4.3: Frequency Drink Alcohol: Glasgow East, Glasgow City and NHSGGC

Those aged under 45 were more likely than older respondents to drink alcohol at least once a week. Men were more likely than women to drink alcohol weekly.

#### Table 4.4: Frequency Drink Alcohol (Q27) by Age and Gender

#### Alcohol Consumption in Previous Week

Respondents were asked whether they had had a drink containing alcohol in the past seven days. Just under half (46%) of all respondents said they had drunk alcohol in the past week (therefore more than the 32% who had said they drank alcohol weekly).

Respondents were asked how many of each type of drink they had consumed on each of the past seven days. Responses were used to calculate the total units of alcohol consumed...
on each day, and a total number of units for the week. For the 2008 survey, in calculating the number of units, new assumptions were applied for the number of units in each type of drink. Appendix D shows the assumptions of units in each type of drink for both the current survey and for the 2005 survey. The data presented here show indicators for both the new unit measures and the old unit measures for comparison.

The recommended weekly limit for alcohol consumption is 21 units per week for men and 14 units per week for women. Using the new unit measures, 19% of all respondents exceeded their weekly limit. This equates to 46% of all those who had drunk alcohol in the last week.

**Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area**

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to exceed the recommended weekly limit for alcohol.

**Figure 4.4: Whether Exceeded Recommended Weekly Limits for Alcohol (new unit measures): Glasgow East, Glasgow City and NHSGGC**

![Bar chart showing the percentage of respondents exceeding the weekly alcohol limit in Glasgow East, Glasgow City, and NHSGGC](chart.png)

Those aged 65 or over were the least likely to exceed the recommended weekly limit for alcohol consumption. Men were more likely than women to exceed their recommended limit (27% of men; 13% of women).
Table 4.5: Proportion Exceeding Recommended Weekly Limits for Alcohol (old new and old unit measures) (Q29) by Age and Gender

Binge Drinking

Binge drinkers were defined as:

- Men who consumed eight or more units of alcohol on at least one day in the previous week;
- Women who consumed six or more units of alcohol on at least one day in the previous week.

Using the new measures for calculating unit totals, 30% of all respondents had been binge drinkers during the previous week. This equates to 70% of all those who had consumed alcohol in the previous week.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were more likely than those in Glasgow City or the NHS Greater Glasgow and Clyde area as a whole to have been binge drinkers in the previous week. This is shown in Figure 4.5.

Figure 4.5: Whether Binge Drinker in Past Week (new unit measures): Glasgow East, Glasgow City and NHSSGC
Those aged under 45 were most likely to be binge drinkers and those aged 65 or over were the least likely. Men were more likely than women to be binge drinkers. This is shown in Table 4.6.

Where People Drink Alcohol

Those who ever drank alcohol were asked where they had drunk alcohol in the last six months. Responses are shown in Figure 4.6. The most common places to have drunk alcohol in the last six months were at a pub and at home.

Figure 4.6: Where Consumed Alcohol in the Last Six Months (Based on All Those who Ever Drank Alcohol)

Comparison with NHS Greater Glasgow & Clyde Area

Figure 4.7 shows that among those who drank alcohol, those in Glasgow East were less likely than those in Glasgow City and the NHSGGC area as a whole to have drunk alcohol at home, at someone else’s home, at a party with friends or at a club or disco. Those in Glasgow East were also less likely than those in the NHSGGC area as a whole to have drunk alcohol in a restaurant, but more likely to have drunk alcohol at a pub.
4.4 Physical Activity

Frequency of Physical Activity

Respondents were asked on how many days per week they take at least 30 minutes of moderate physical exercise such as brisk walking. They were also prompted to ensure that they included all physical activity that they do in their job, housework, DIY and gardening. In total, 22% of respondents said that they took at least 30 minutes of moderate activity on five or more days per week.

Respondents were also asked on how many days they took at least 20 minutes of vigorous activity (enough to make them sweaty and out of breath). This also included a prompt to ensure that all activity done in work, housework, DIY and gardening were included. In total, 19% said that they took at least 20 minutes of vigorous activity on three or more days per week.

The target for physical activity is to take 30 minutes or more of moderate physical activity on five or more days per week OR 20 minutes of vigorous activity on three or more days per week. In total, 34% of respondents met this target.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Compared to those in Glasgow City and the NHSGGC area as a whole, those in Glasgow East were less likely to meet the target for physical activity.
Those aged 65 or over were least likely to meet the target for physical activity and those aged under 45 were most likely to do so. Men were more likely than women to meet the target.

Participation in Sport in the Last Week

Respondents were asked whether they had participated in specific sports in the last week. Responses are shown in Figure 4.9. A third (34%) of respondents had participated in at least one sport in the last week. The most common sports were swimming (17%) and cycling (9%).

Figure 4.9: Proportion Participating in Sports in the Last Week

Of those who said that they participated in ‘other sports’, the most common sports were walking (63%) and bowling (9%).

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in Glasgow City or the NHSGGC area as a whole to have participated in any sport in the last week. Specifically, those in Glasgow East were less likely to have participated in gym workouts and running/jogging. However, those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to have participated in swimming or cycling, and more likely than those in the NHSGGC area to have participated in aerobics.
Figure 4.10: Proportion Participating in Sports in the Last Week: Glasgow East, Glasgow City and NHSGGC (all sports showing a significant difference)

The likelihood of having participated in at least one sport in the last week decreased with age, ranging from 41% of those aged 16-44 to 22% of those aged 65 and over.

4.5 Diet

Fruit and Vegetables

The national target for fruit and vegetable consumption is to have at least five portions of fruit and/or vegetables per day. Responses indicate that 30% of respondents met this target and 9% had no fruit or vegetables in a day.

Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in Glasgow City or the NHS Greater Glasgow & Clyde area as a whole to consume five or more portions of fruit/vegetables per day.
Table 4.9 shows that women were more likely than men to meet the target for fruit/vegetable consumption.

**Table 4.9: Proportion Who Consume Target Amount of Fruit/Vegetables (Q32/Q33) by Gender**

</tbody>
</table>

Respondents were asked what they had eaten for breakfast that morning. On the morning of the survey, 13% of respondents had not eaten breakfast. The most commonly consumed items were cereal and bread/toast, as shown in Figure 4.12.

Figure 4.12: Items Consumed for Breakfast That Morning (Q39)

- Cereal: 47.8%
- Bread/toast: 37.4%
- Porridge: 12.0%
- Meat: 8.7%
- Eggs: 3.3%
- Fruit (inc. Juice): 3.0%
- Yoghurt: 1.4%
- Pastry: 0.3%
- Breakfast bar: 0.3%
- Other: 0.1%
- Nothing: 13.3%

Oily Fish

The recommended target is to consume two or more portions of oily fish per week. One in nine (11%) respondents met this target.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in Glasgow City or the NHSGGC area as a whole to meet the target for oily fish consumption. This is shown in Figure 4.13.
High Fat and Sugary Snacks

Two in four (42%) respondents exceeded the recommended daily limit of one high fat and sugary snack (e.g. cakes, pasties, chocolate, biscuits, crisps).

Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were more likely than those in the NHSGGC area as a whole to exceed the recommended daily limit for high fat and sugary snacks (42% Glasgow East; 36% NHSGGC).

Figure 4.14: Whether Exceed Recommended Daily Limit of 2 Portions of High Fat/Sugary Snacks: Glasgow East and NHSGGC
Bread

Respondents were asked how many slices of bread (or equivalent rolls, chapattis, naan etc) they consumed on an average day. Responses showed that 3% ate fewer than one slice per day, 10% had one slice, 43% had two slices, 9% had three slices and 26% had four slices. In total, 8% met the target of consuming five or more slices (or equivalent) of bread per day. The mean number of slices per day was 2.81.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Compared to those in Glasgow City and the NHSGGC area as a whole, those in Glasgow East were more likely to consume five or more slices of bread per day.

Figure 4.15: Whether Meet Recommended Daily Target for Bread Consumption: Glasgow East, Glasgow City and NHSGGC

Those aged 45-64 were more likely to meet the target for bread consumption. Men were more likely than women to meet the target for bread consumption. This is shown in Table 4.11.

4.6 Body Mass Index (BMI)

Respondents were asked to state their height and weight, from which their Body Mass Index (BMI) was calculated.

BMI classification points are defined as follows:

- Underweight: BMI below 18.5
- Ideal weight: BMI between 18.5 and 24.99
- Overweight: BMI between 25 and 29.99
- Obese: BMI between 30 and 39.99
- Very obese: BMI 40 or over
However, due to a recognised tendency for people to over-report height and under-report weight, a revised cut off for obesity has been applied at 29.2. The table in this section shows both measures of obesity.

Altogether, half (50%) of respondents had a BMI of 25 or over, indicating that they are overweight or obese. Using the new definition obesity (BMI of 29.2), 20% of respondents were classified as obese.

**Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area**

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to be overweight or obese.

**Figure 4.17: Body Mass Index: Glasgow East, Glasgow City and NHSGGC**

Those aged 45-64 were more likely to be obese. This is shown in Table 4.13.

### 4.7 Unhealthy and Healthy Behaviour Indices

**An Unhealthy Behaviour Index**

This section examines the extent to which multiple ‘unhealthy’ behaviours are exhibited by the same people. An ‘unhealthy’ behaviour index has been derived from the following five unhealthy behaviours:

- Smoking;
- Having a BMI of 25 or over;
- Not meeting the recommended levels of physical activity;
• Not meeting the recommended level of fruit and vegetable consumption; and
• Binge drinking.

Figure 4.18 shows that most (97%) respondents exhibited at least one of these behaviours, but just 3% exhibited all five. The mean number of unhealthy behaviours was 2.58.

**Figure 4.18: Number of Unhealthy Behaviours Exhibited**
Unweighted N=492

![Pie chart showing the distribution of unhealthy behaviours exhibited by respondents.](chart)

**Comparison with Glasgow City and NHS Greater Glasgow & Clyde**

Those in Glasgow East tended to exhibit more unhealthy behaviours than those in Glasgow City or the NHSGGC area as a whole (means: 2.58 Glasgow East; 2.22 Glasgow City; 2.14 NHSGGC).

Those aged 45-64 tended to exhibit the most unhealthy behaviours. Men tended to exhibit more unhealthy behaviours than women. This is shown in Table 4.14.

**Table 4.14: Mean Number of Unhealthy Behaviours by Age and Gender**

**A Healthy Behaviour Index**

A ‘healthy behaviour index’ was also developed, which examined the extent to which respondents exhibited multiple healthy behaviours. The five healthy behaviours used in the index were:

• Not smoking;
• Having a BMI within the ideal range (18.5 to 24.99);
• Meeting the physical activity recommendations;
• Consuming five or more portions of fruit/vegetables per day; and
• Either not drinking or drinking within safe limits (i.e. not binging to drinking too much in a week).

Figure 4.19 shows that most (97%) respondents exhibited at least one healthy behaviour, and 3% of respondents exhibited all five. The mean number of healthy behaviours was 2.49.

**Figure 4.19: Number of Healthy Behaviours Exhibited**
Unweighted base=435

![Pie chart showing the distribution of healthy behaviours exhibited by respondents.](image)

**Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area**

Those in Glasgow East tended to exhibit fewer healthy behaviours than those in Glasgow City or the NHSGGC area as a whole (means = 2.49 Glasgow East; 2.85 Glasgow City; 2.93 NHSGGC).

Those aged 45-64 tended to exhibit the fewest unhealthy behaviours. Women tended to exhibit more healthy behaviours than men, as shown in Table 4.15.

**Table 4.15: Mean Number of Healthy Behaviours by Age and Gender**

4.8 Attitudes to Breastfeeding

Respondents were given three statements relating to breastfeeding in public and asked to state the extent to which they agreed or disagreed with each. The first statement was:

*Women should be made to feel comfortable breastfeeding their babies in public.*

Nine in ten (90%) respondents agreed with this (51% strongly agreed and 39% tended to agree) and 10% disagreed (5% tended to disagree and 5% strongly disagreed).

The second statement was:

*Women should only breastfeed their babies at home or in private.*

Overall, 15% agreed with this (7% strongly agreed and 9% tended to agree) and 85% disagreed (31% tended to disagree and 54% strongly disagreed).

The third statement was:

*I would feel embarrassed seeing a woman breastfeeding her baby.*

One in five (19%) respondents agreed with this (7% strongly agreed and 12% tended to agree) and 81% disagreed with this statement (27% tended to disagree and 54% strongly disagreed).

**Comparison with NHS Greater Glasgow & Clyde Area**

Those in Glasgow East were less likely than those in Glasgow City or the NHSGGC area as a whole to agree that women should only breastfeed at home/in private. Also, those in Glasgow East were less likely than those in Glasgow City to say they would feel embarrassed seeing a woman breastfeeding.

**Figure 4.20: Agree/Disagree with Statements Relating to Breastfeeding: Glasgow East, Glasgow City and NHSGGC (all showing significant difference)**

![Bar chart showing agreement and disagreement with statements]

Table 4.16 shows that those aged 65 or over were less likely to agree with the positive statement about breastfeeding and more likely to agree with the two negative statements.
Also, men were less likely than women to agree with the positive statement and more likely to agree with the negative statements.

</table>

One in 20 (5%) respondents felt isolated from family and friends.

One in 10 (10%) belonged to a club/organisation etc. Women were less likely to do so.

Three in four (73%) felt that they belonged to their local area. Those aged under 45 were less likely to feel that they belonged to the local area.

Just over half (55%) felt valued as a member of their community. Those aged under 45 were less likely to do so.

Just under three in five (57%) agreed that people in their neighbourhood working together could influence local decisions. Those aged under 45 and men were less likely to agree with this.

Three in five (60%) exchanged small favours with neighbours. Those aged under 45 and men were less likely to do so.

Three in five (60%) identified with a religion. Those aged under 45 and men were less likely to do so.

One in 30 (3%) respondents said they had experienced at least one form of discrimination in the last year.

Most (96%) felt safe in their own home.

More than nine in ten (93%) felt safe using public transport in their area. Those aged 45-64 were less likely to do so.

Three in five (61%) felt safe walking alone in their area even after dark. Those aged under 45 and women were less likely to do so.
5.2 Social Connectedness

Isolation from Family and Friends

When asked whether they ever felt isolated from family and friends, 5% said yes.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in Glasgow City or the NHSGGC area as a whole to feel isolated from family and friends.

Figure 5.1: Feel Isolated from Family and Friends: Glasgow East, Glasgow City and NHSGGC

Club Membership

One in ten (10%) respondents said that they attended any social clubs, associations, church groups or anything similar. Of those who said they attended clubs or associations, most (98%) attended at least one club locally and 5% attended any clubs elsewhere.

Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in the NHS Greater Glasgow and Clyde area as a whole to belong to a club, association, etc.
Figure 5.2: Belong to Social Club, Association Etc: Glasgow East and NHSGGC

Men were more likely than women to belong to a club, association, etc (13% of men and 8% of women did so).

Influence in the Neighbourhood

Respondents were asked the extent to which they agreed or disagreed with the statement, “By working together people in my neighbourhood can influence decisions that affect my neighbourhood”. In total, 57% agreed with this statement (17% strongly agreed and 40% agreed), while 14% disagreed and 29% neither agreed nor disagreed.

Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in the NHSGGC area as a whole to feel that local people can influence local decisions (57% Glasgow East; 64% NHSGGC).
Those aged under 45 were the least likely to agree that local people can influence local decisions and those aged 65 or over were the most likely to agree with this. Also, women were more likely than men to agree that that local people can influence local decisions. This is shown in Table 5.5.

**Exchanging Small Favours with Neighbours**

Respondents were asked whether they ever exchange small favours with the people who live near them (e.g. leaving a key to let in a repair man, feeding pets while you are away or picking up things from the shops for each other). Three in five (60%) said that they did (27% did so with one neighbour, 20% did so with two neighbours and 13% did so with three or more neighbours).

**Comparison with Glasgow City**

Those in Glasgow East were more likely than those in Glasgow City as a whole to exchange small favours with neighbours (60% Glasgow East; 51% Glasgow City).
Those aged 16-44 were the least likely to exchange small favours with neighbours, and those aged 45-64 were the most likely. Women were more likely than men to exchange small favours. This is shown in Table 5.6.

**Experience of Discrimination**

Respondents were asked whether they had experienced discrimination in the last 12 months on any grounds including accent, age, disability, ethnicity, language, nationality, religion, sex, sexual orientation, skin colour or anything else. In total 3% of respondents had experienced at least one form of discrimination in the last year.
5.3 Length of Residency – Neighbourhood and Current Home

Across all respondents, the mean length of residency in the neighbourhood was 24.2 years, and the mean length of residency in the current home was 12.4 years.

Figure 5.8: Length of Residency (Neighbourhood and Current Home)

5.4 Feelings of Safety

Feeling Safe in Own Home

Most (96%) respondents agreed that they felt safe in their own home (60% strongly agreed and 36% agreed), while less than 1% disagreed and 4% neither agreed nor disagreed.

Feeling Safe Using Public Transport

Respondents were asked the extent to which they agreed or disagreed with the statement “I feel safe using public transport in this local area”. In total, 93% agreed with this (26% strongly agreed and 67% agreed), while 3% disagreed and 3% neither agreed nor disagreed.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to feel safe using public transport in their local area.
Table 5.8 shows that those aged 45-64 were less likely to feel safe using public transport in their local area.

5.5 Social Issues in the Local Area

Using the ‘faces’ scale, respondent were asked to indicate how they felt about a range of perceived social problems. Faces 5 to 7 are classified as negative perceptions and indicate that respondents are concerned about these issues.

The social issues which most frequently caused concern were level of unemployment, and amount of drug activity.

**Figure 5.10: Negative Perception of Social Issues in the Local Area (Q56a-h)**

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Figure 5.11 shows that compared to both Glasgow City and the NHSGGC area as a whole, those in Glasgow East were less likely to be concerned about burglaries, car crime, vandalism, young people hanging around and level of alcohol consumption. Also, those in Glasgow East were less likely than those in the NHSGGC area as a whole to be concerned about assaults/muggings. However, those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to be concerned about the level of unemployment in their area.
Figure 5.11: Negative Perception of Social Issues in the Local Area: Glasgow East, Glasgow City and NHSGGC (all issues showing a significant difference)

5.6 Environmental Issues in the Local Area

Again using the ‘faces’ scale, respondents were asked to indicate how they felt about a range of perceived environmental problems. Faces 5 to 7 are classified as negative perceptions and indicate that respondents are concerned about these issues.

The environmental issues which most frequently caused concern were the amount of dogs dirt and availability of pleasant places to walk. This is shown in Figure 5.12.
As Figure 5.13 shows, those in Glasgow East were less likely than those in Glasgow City or the NHS Greater Glasgow & Clyde area as a whole to be concerned about the number of uneven pavements or the amount of traffic in their area. Also, those in Glasgow East were less likely than those in Glasgow City as a whole to be concerned about the level of smell from sewers, abandoned cars, broken glass, derelict land or vacant/derelict buildings or the amount of noise/disturbance. However, those in Glasgow East were more likely than those in the NHSGGC area as a whole to be concerned about the availability of pleasant places to walk and the amount of rubbish lying about.
5.7 Perceived Quality of Services in the Area

Respondents were given a list of seven local services and asked to rate each (excellent, good, adequate, poor or very poor). Figure 5.14 shows the responses to each type of service. The number of respondents answering ‘don’t know’ varied for different types of service reflecting the level of use. ‘Don’t know’ responses have been excluded from analysis, and Figure 5.14 shows the number of respondents who gave a rating response for each service.

The services for which the largest proportion of respondents gave a positive rating were public transport and local schools. Activities for young people and leisure/sports facilities had the lowest proportion of respondents giving a positive rating.
Figure 5.15 shows that those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to have a positive perception of public transport, food shops, childcare provision, police and activities for young people. Also, those in Glasgow East were more likely than those in Glasgow City as a whole to have a positive perception of local schools, and more likely than those in the NHSGGC area as a whole to have a positive perception of leisure/sports facilities.
5.8 Individual Circumstances

Household Size

One in five (19%) respondents lived alone. Figure 5.16 shows the breakdown of household size.
Ethnicity

Respondents were asked their ethnicity. Most (98%) identified themselves as White, and 2% were from other ethnic backgrounds.

Marital Status

Three in five (59%) respondents were married or living with their partner. Figure 5.17 shows the breakdown of marital status.

The age group most likely to describe themselves as married or cohabiting was 45-64 year olds, of whom 69% were married or living with their partner.
Internet Access

Just under three in five (57%) respondents had access to the internet, and 53% had access to the internet in their home. Those aged 16-44 were the most likely to have internet access at their home (66% in this age group did), while those aged 65 and over were the least likely to have internet access at home (16% did).

Car Ownership

Just under half (47%) of respondents said that they or someone in their household owned a car. Car ownership was highest among those aged 45-64 (59% of whom owned a car).

Those in Glasgow East were less likely than those in the NHSGGC area as a whole to own a car (47% Glasgow East; 58% NHSGGC).

Main Form of Transport

Respondents were asked which mode of transport they normally use for most journeys they make. Just under a quarter (23%) said their usual mode was active travel (walking, cycling); 38% said it was private personal travel (car, motorcycle) and 39% said that it was public travel (bus, train, underground, taxi).

Caring Responsibilities

A small proportion (1.2%) of respondents said that they were responsible for caring for someone on a day to day basis (excluding regular childcare). Of these, the mean number of hours per day spent caring was 10.2.

Those in Glasgow East were less likely than those in Glasgow City or the NHSGGC area as a whole to have caring responsibilities (1.2% Glasgow East; 2.8% Glasgow City; 3.2% NHSGGC).

Educational Qualifications

Three in ten (30%) had no educational qualifications. Those aged under 45 were less likely to have no qualifications (19% in this age group had no qualifications) and those aged 65 or over were the most likely to have no qualifications (46% aged 65 or over had no qualifications).

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to have no qualifications (30% Glasgow East; 26% Glasgow City; 21% NHSGGC).

Proportion of Household Income from State Benefits

Three in five (60%) respondents said that at least some of their household income came from state benefits, and 29% said that all their household income came from state benefits.

Those in Glasgow East were more likely than those in the NHSGGC area as a whole to say that all their household income came from state benefits 29% Glasgow East; 24% NHSGGC).

Difficulty Meeting the Cost of Specific Expenses

Figure 5.18 shows the proportion of respondents who said they had difficulty meeting specific expenses often, occasionally and never.
All together, 58% said that they ever had difficulty meeting the costs of rent/mortgage, fuel bills, telephone bills, council tax/insurance, food or clothes/shoes.

Those aged 65 or over were less likely to say that they ever had difficulty meeting these costs (45% in this age group did), and those aged 45 or over were the most likely (63%).

Overall, those in Glasgow East were more likely than those in the NHSGGC area as a whole to ever have difficulty meeting these costs (58% Glasgow East; 47% NHSGGC).

**Difficulty Finding Unexpected Sums**

A third (36%) said that they would have a problem meeting an unexpected expense of £20; two thirds (64%) said they would have a problem meeting an unexpected expense of £100 and 87% would had a problem finding £1,000 for an unexpected expense.

Those in Glasgow East were more likely than those in Glasgow City and the NHSGGC area as a whole to have a problem finding £20 (36% Glasgow East; 27% Glasgow City; 18% NHSGGC) or £100 (64% Glasgow East; 60% Glasgow City; 49% NHSGGC). Also, those in Glasgow East were more likely than those in the NHSGGC area as a whole to have a problem finding £1,000 (87% Glasgow East; 80% NHSGGC).

**Factors about the Home that Affect Health**

Just 1% of respondents said that there was something about their home that affected their health.

**Economic Activity**

Just under half (47%) of respondents were in employment (42% were employed full time and 5% were employed part time). Of those aged under 75, 68% lived in households where the main wage earner was economically active.
Social Class

Social class classifications were derived from information about the occupation of the main wage earner (or former occupation if retired). In total, 7% comprised class A/B, 43% comprised C1/C2 and 50% comprised class D/E.

Migrant Workers

One in 38 (2.6%) respondents described themselves as migrant workers.

Sexual Orientation

Most (98%) respondents described their sexual orientation as heterosexual while 1% said that they were gay or lesbian and 1% said they were bisexual.
6 Social Capital

6.1 Chapter Summary

Table 6.1 summarises the indicator data for social capital.

</tbody>
</table>

More than four in five (86%) had a positive perception of there area as a place to live and 83% had a positive perception of their area as a place to bring up children.

A small proportion (2%) of respondents were volunteers.

Three in four (75%) had a positive perception of reciprocity in their area and 71% had a positive perception of trust in their area. Those aged under 45 were less likely to have positive views of reciprocity and trust.

Three in four (73%) valued local friendships. Those aged under 45 were less likely to do so.

Three in four (73%) had a positive perception of social support in their area. Those aged under 45 were less likely to have a positive perception of social support.

6.2 View of Local Area

Respondents were presented with the seven ‘faces’ scale and asked to indicate how they felt about their area a) as a place to live; and b) as a place to bring up children. Those choosing any of the three ‘smiley’ faces (1-3) were categorised as having a positive perception. Overall, 86% had a positive view of their area as a place to live and 83% had a positive view of the area as a place to bring up children.

**Comparison with Glasgow City**

Compared to those in Glasgow City as a whole, those in Glasgow East were more likely to have a positive view of their area as a place to live or to bring up children. This is shown in Figure 6.1.
6.3 Volunteering

A small proportion (2.2%) of respondents were volunteers. Those who volunteered did so for a mean of 6.66 hours per week.

Comparison with NHS Greater Glasgow & Clyde Area

Those in Glasgow East were less likely than those in the NHSGGC area as a whole to be a volunteer (2.2% Glasgow East; 3.8% NHSGGC).

6.4 Reciprocity and Trust

Respondents were asked to indicate the extent to which they agree or disagree with the following statements:

“This is a neighbourhood where neighbours look out for each other”, and “Generally speaking, you can trust people in my local area”.

Those agreeing with the first statement were categorised as having a positive view of reciprocity, and those agreeing with the second were categorised as having a positive view of trust. Overall, 75% were positive about reciprocity and 71% were positive about trust.

Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area

Compared with those in Glasgow City or the NHSGGC area as a whole, those in Glasgow East were more likely to have positive views of reciprocity. Also, those in Glasgow East were more likely than those in Glasgow City as a whole to have positive views about trust. This is shown in Figure 6.2.
Those aged 16-44 were the least likely to have positive views of reciprocity or trust. This is shown in Table 6.2.

### 6.5 Local Friendships

Respondents were asked to indicate the extent to which they agree or disagree with the statement: “The friendships and associations I have with other people in my local area mean a lot to me”. Overall, 73% agreed with this statement.

**Comparison with Glasgow City and NHS Greater Glasgow & Clyde Area**

Those in Glasgow East were more likely than those in Glasgow City or the NHSGGC area as a whole to value local friendships.
Those aged under 45 were less likely to value local friendships and those aged 65 or over were more likely to do so. This is shown in Table 6.3.

**Table 6.3: Proportion Value Local Friendships (Q71c) by Age**

**6.6 Social Support**

Respondents were asked to indicate the extent to which they agree or disagree with the statement: "If I have a problem, there is always someone to help me". Those agreeing with this statement were categorised as having a positive view of social support. According to this definition, 73% were positive about social support.

**Comparison with Glasgow City**

Compared to those in Glasgow City as a whole, those in Glasgow East were more likely to have a positive view of social support. This is shown in Figure 6.4.
Those aged under 45 were less likely to have a positive view of social support.

Summary of Comparisons with NHS Greater Glasgow & Clyde Area

This chapter presents a summary of the comparisons of indicator data from Glasgow East to those for Glasgow City and the NHS Greater Glasgow & Clyde area as a whole.

7.1 Indicators showing More Favourable Findings

Compared to those in both Glasgow City and the NHS Greater Glasgow & Clyde area as a whole, those in Glasgow East were:

- More likely to say it was easy to get a GP appointment;
- Less likely to have difficulty getting a hospital appointment;
- More likely to say that it was easy to get a consultation with a GP within 48 hours when needed;
- More likely to say that it was easy to access health services in an emergency;
- Less likely to say that someone in their household had suffered an accident at home in the last year;
- More likely to have participated in swimming or cycling in the previous week;
- More likely to meet the target for bread consumption;
- Less likely to agree that women should only breastfeed at home/in private;
- Less likely to feel isolated from family and friends;
- More likely to feel safe using public transport in their area;
- Less likely to be concerned about burglaries, car crime, vandalism, young people hanging around and level of alcohol consumption;
- Less likely to be concerned about the number of uneven pavements or the amount of traffic in their area;
- More likely to have a positive perception of public transport, food shops, childcare provision, police and activities for young people;
- Less likely to have caring responsibilities;
- More likely to have a positive view of reciprocity; and
- More likely to value local friendships.

Compared to those in Glasgow City as a whole, those in Glasgow East were:

- More likely to have visited the dentist within the last six months;
- Less likely to say they would feel embarrassed seeing a woman breastfeeding;
- More likely to feel that they belonged to the local area;
- More likely to feel valued as a member of their community;
- More likely to exchange small favours with neighbours;
- Less likely to be concerned about the level of smell from sewers, abandoned cars, broken glass, derelict land or vacant/derelict buildings or the amount of noise/disturbance;
- More likely to have a positive perception of public transport, food shops, childcare provision, police and activities for young people;
- Less likely to have caring responsibilities;
- More likely to have a positive view of local schools;
- More likely to have a positive view of their area as a place to live;
- More likely to have a positive view of their area as a place to bring up children;
- More likely to have a positive view of trust; and
- More likely to have a positive view of social support.

Compared to those in the NHS Greater Glasgow & Clyde area as a whole, those in Glasgow East were:

- Less likely to be receiving treatment for coronary heart disease;
- Less likely to have a high GHQ12 score (indicating poor mental health);
- More likely to brush their teeth twice or more per day;
- More likely to have visited the dentist within the last 15 months;
• (Of those who had used health services in the last year) more likely to feel that they had a say in how health services are delivered;
• More likely to have participated in aerobics in the last week;
• Less likely to be concerned about assaults/muggings; and
• More likely to have a positive perception of local leisure/sports facilities.

7.2 Indicators showing Less Favourable Findings

Compared to those in both Glasgow City and the NHS Greater Glasgow & Clyde area as a whole, those in Glasgow East were:

• Less likely to have a positive view of their general health;
• Less likely to have a positive view of their physical wellbeing;
• (Of those who had used health services in the last year) less likely to feel they had definitely been given adequate information about their condition or treatment;
• More likely to be exposed to second hand smoke most or some of the time;
• More likely to be smokers;
• Less likely to say that they never drank alcohol;
• More likely to exceed the recommended weekly limit for alcohol consumption;
• More likely to have been a binge drinker in the previous week;
• Less likely to meet the target for physical activity levels;
• Less likely to have participated in a sport in the last week and specifically, less likely to have participated in gym workouts and running/jogging;
• Less likely to eat five or more portions of fruit/vegetables per day;
• Less likely to meet the target of consuming two or more portions of oily fish per week;
• More likely to eat fast food takeaways at least once a week;
• More likely to be overweight or obese;
• More likely to be concerned about the level of unemployment in their area;
• More likely to have no qualifications; and
• More likely to have difficulty finding unexpected sums of £20 or £100.

Compared to those in the NHS Greater Glasgow & Clyde area as a whole, those in Glasgow East were:

• Less likely to have a positive view of their mental/emotional wellbeing;
• Less likely to have a positive view of their quality of life;
• More likely to be receiving treatment for diabetes;
• Less likely to be registered with a dentist;
• More likely to exceed the recommended limit of one high fat/sugary snack per day;
• Less likely to belong to a club/association, etc;
• Less likely to identify with a religion;
• More likely to be concerned about the availability of pleasant places to walk and the amount of rubbish lying about in their area;
• Less likely to own a car;
• More likely to receive all household income from state benefits;
• More likely to ever have difficulty meeting the cost of bills etc;
• More likely to have difficulty finding an unexpected sum of £1,000; and
• Less likely to be a volunteer.

7.3 Other Significant Differences

Compared to those in both Glasgow City and the NHS Greater Glasgow & Clyde area as a whole, those in Glasgow East were:

• More likely to have seen a GP in the last year;
• More likely to have visited a pharmacist for health advice in the last year; and
• (Of those who ever drank alcohol) less likely to have drunk alcohol at home, at someone else’s home, at a party with friends or at a club or disco.

Compared to those in the NHS Greater Glasgow & Clyde area as a whole, those in Glasgow East were:

• Less likely to have visited a doctor at hospital as an outpatient in the last year;
• Less likely to have visited accident and emergency in the last year;
• (Of those who ever drank alcohol) more likely to drink alcohol at a pub; and
• (Of those who ever drank alcohol) less likely to drink alcohol at a restaurant.
In this chapter, results from all indicator questions that represent a statistically significant change between 2008 and 2005 are shown.

The formula used to test for significant change is a hypothesis test for two proportions. The 'null hypothesis' is that there is no change since 2005. The following formula yields a 'test statistic' (z):

\[
z = \frac{p_1 - p_2}{\sqrt{p_\hat{} (1 - p_\hat{}) \left( \frac{1}{n_1} + \frac{1}{n_2} \right)}}
\]

\[
p_\hat{} = \frac{x_1 + x_2}{n_1 + n_2} = \frac{n_1 p_1 + n_2 p_2}{n_1 + n_2}
\]

If the value of z falls outside of the range (-1.96 to 1.96), we reject the null hypothesis and conclude that there has been significant change since 1999 (at the 95% confidence level).

For those results that show significant change, we have also calculated a confidence interval for the difference between any two sets of results.

\[
\left( p_1 - p_2 \right) \pm 1.96 \sqrt{\frac{p_1(1 - p_1)}{n_1} + \frac{p_2(1 - p_2)}{n_2}}
\]

For example, the confidence interval for the first result shown in Table 8.1 is (5.8 to 15.2). This means that we can be 95% confident that, had we interviewed the entire population of Glasgow East in the surveys, the actual difference between the two sets of results would be between 5.8 and 15.2 percentage points.

The tables show the results, and also show p values. Where p is less than 0.05, the change is considered to be significant. P values are reported as one of three levels of significance: <0.05, <0.01 and <0.001. A p value of <0.05 means that we can be 95% confident that a 'real' change has taken place. A p value of <0.01 means that we can be 99% confident, and a p value of <0.001 means that we can be 99.9% confident.
Only significant changes over time have been mentioned in the text. Where a change is not significant, the size of the change is not shown in the table, and no p value is shown.

It should be noted that the formulae used in this chapter only strictly apply to simple random samples, whereas this survey uses a complex multi-stage sample design. For this reason, results of tests should be interpreted with caution, particularly if the result is on the margins of statistical significance.

8.1 People’s Perceptions of their Health and Illness

Between 2005 and 2008 there was an increase in the proportion of respondents who gave a positive perception of their general health.

**Table 8.1: Positive Perceptions of General Health**

**APPENDIX A: SURVEY METHODOLOGY & RESPONSE**

**Sampling**

It was necessary to adopt a sampling system which would be:

- Representative of the population of NHSGGC (and the former NHSGG) as a whole in terms of age, sex and geographical distribution and SIMD
- Comparable with the survey used in 1999, 2002 AND 2005, to allow results to be compared across the surveys
- Replicable, so that future surveys can track indicators over time.

The sample was stratified by local authority (8 authorities) and by SIMD quintile (5 categories). The target sample size was set at 8,253. To achieve this, clusters were sampled in proportion to the population in each stratum. In addition, 3 areas we over sampled to allow comparison between the bottom 15% SIMD areas and other areas within the CH(C)P.

The sample was drawn from the Postal Address File (PAF) by CACI, to a specification provided by MRUK. The PAF was sorted into the strata above. Within each stratum, the PAF was then sorted in alphanumeric order by postcode and house number/name. Interval samples were then taken.

Before the addresses were issued to interviewers, NHSGGC and Inverclyde CHP screened the sample to identify areas containing high levels of “deadwood” (eg business addresses, derelict buildings). Where they were found, they were replaced with other addresses that were a match in terms of the sample strata.

**Questionnaire design and pilot**

The questionnaire was based on the questionnaire used in 2005 in NHSGG, but some new questions have been added. It was felt that the questionnaire had reached its maximum practicable length, so the addition of new questions had to be balanced by commensurate cuts elsewhere in the questionnaire. Questions for which data were deemed to be least useful in 2005 were selected for deletion in 2008.

In turn, the 2008 questionnaire had been based on the one used in 1999, with some changes and order to make the interview run more smoothly. Thus, most of the questions in the 2008 questionnaire can be tracked back to 1999 and/or 2002; 2005.

Once a draft questionnaire had been agreed, a pilot survey was conducted.

The pilot ensured that:

- The questionnaire structure flowed easily, thereby maintaining the interest of the respondent over the duration of the interview which was not considered to be onerous;
- The routing of questions was complete;
- The questions were understood by a range of respondents. It was recognised that the questions had to be coherent and meaningful to people of difference levels of ability.

Following the pilot, a few minor changes were made to the questionnaire, but question wording largely remained as it was in 2005.
Fieldwork

MRUK were responsible for the fieldwork element of the project. A team of interviewers attended a briefing session which was conducted by MRUK and representatives from NHS GG & Clyde. The briefing session involved full instructions in the conduct of the survey interview. The questionnaire was administered through computer based software with instructions included on the computer screens.

Interviewers were assigned a number of clusters. Their instructions were to make at least six calls at an address at different times of the day/days of the week before classifying the addresses as a non-response.

Respondents were randomly selected within households using the “next birthday rule”. The person aged 16 or over who would next have a birthday was chosen for interview.

Each sample address was sent an advance letter from NHS GG & Clyde explaining the purpose of the survey and requesting cooperation. As a result of this letter, a number of residents contacted NHS GG & Clyde to “opt out” of the survey. These addresses were removed from the lists given to interviewers and these households were not contacted further by MRUK.

Each interviewer was provided with a letter of authorisation to show on the doorstep. Interviewers were also instructed to carry their MRUK photo-identity card at all times and to display this to all potential respondents. Each interviewer also carried a stock of leaflets that explained more about the survey and why participation was important. A leaflet was left with every respondent.

Fieldwork began immediately after the briefing session in mid August 2008 and was completed by mid December 2008. A total of 8,278 interviews were completed. The average interview length was 30 minutes.

Response Rate

A total of 8,278 interviews were achieved from a starting sample of 16,658 addresses. Therefore a successful interview was achieved with 49.69% of all contact addresses. A number of interviews were considered out of scope for the following reasons:

- The address could not be traced
- The address had not been built or was not ready for occupation
- The address had been demolished
- The address was vacant or empty
- The address was for business or industrial use only (ie not residential)
- The address was an institution

Once the out of scope addresses had been removed, 11,889 addresses were remaining. This equated to a response rate of 69.64% which compares well to the 2005 survey where a 71% response rate was achieved.

Date coding

Data from the open questions were coded using the same code frames as were used in each of the earlier surveys. NHS GG & Clyde were involved in re-coding some of the lists of codes, which referred to medical conditions.

The interviews were conducted with computer based software; this removed the requirement to enter the data separately.

Additional core indicator variables were computed and added to the data set. These were specified by NHS GG & Clyde.
Data were weighted before analysis. This replicated the approach taken in earlier surveys.
APPENDIX B: DATA WEIGHTING

Introduction

Data were weighted to ensure that they were as representative as possible of the adult population in the GGNHSB area. This appendix describes the weighting processes.

Household Size Weighting

In this survey, households were selected at random and therefore had equal probability of selection. However within the household the probability of an individual's selection is not necessarily equal to that of others, since it is inversely proportional to the number of people available to be selected. For example, in a single-person household the probability of selection is exactly 1 whereas in a four-person household the probability of selection is 1/4. The logic of this implies that the respondent from the single-person household represents one person (him/herself) while the respondent from the four-person household is in fact representing four people. It is normal to allow for this bias by 'weighting' the sample to give the respondent from the four-person household four times the 'weight' of the respondent from the one-person household. It is usual to calculate this weighting in such a way that the sum of the weights matches the sample size.

The formula for calculating the household size weight was:

\[ W_f = F \times \frac{T}{A} \]

Where:

- \( W_f \) is the household size weighting factor for a respondent living in a household size \( F \).
- \( F \) is the household size
- \( T \) is the total number of respondents
- \( A \) is the total number of adults in all households where a successful interview took place.

Weighting by Age/Gender/Bottom 15%/CH(C)P

Firstly the household size weighting was applied to the dataset. This produced the new 'actual' counts to which we applied the age/sex/bottom15%/CH(C)P weighting frame to produce the final weighting factors. This ensured that the weighted data would reflect the overall Greater Glasgow and Clyde population in terms age, gender, bottom 15%/other areas and CH(C)P areas. The formula for this stage of the weighting process was:

\[ W_i = \frac{c_i}{C} \times \frac{T}{n_i} \]

Where:

- \( W_i \) is the individual weighting factor for a respondent in age/gender/bottom15% versus other areas/CH(C)P area group \( i \)
- \( c_i \) is the known population in age/gender/bottom15% versus other areas/CH(C)P area group \( i \)
- \( C \) is the total adult population in the NHS Greater Glasgow and Clyde area
\( T \) is the total number of interviews

\( t_i \) is the number of interviews (weighted by the household size weighting factor) for age/gender/bottom 15\% versus other areas/CH(C)P area group \( i \)
The table below shows the assumed number of units of alcohol in each type of drink that were used for the calculation of unit consumption in 2005, and the new assumptions that have been applied in 2008.

APPENDIX D: ANNOTATED SURVEY QUESTIONNAIRE

The survey questionnaire is presented here. Where relevant, questions show:

- The number of respondents who answered the question (with “don’t know”, refused and missing responses removed). These are unweighted and shown as “(n=)” after the question;

- The percentage of respondents who gave each response. These are weighted.

In some cases, the mean response rather than the percentage giving individual responses is given. These are also weighted.
Good morning/afternoon/evening. My name is ....................... from an independent research agency called mruk research. We are carrying out a research study on behalf of the NHS Greater Glasgow and Clyde. I wonder if I could ask you some questions? The survey is about your health including issues such as diet, exercise and the area you live in

(It should take about half an hour.)

This interview has been conducted within the Code of Conduct of the Market Research Society.
