1. NATIONAL CONTEXT

The strategic objectives of the national plans and policies continue to be to: promote positive sexual wellbeing; to reduce adverse consequences of sexual activity; to prevent new STIs and blood-borne virus infections and to ensure effective service delivery.

1.2 The National Framework outcomes are;

- Fewer newly acquired blood borne virus and sexually transmitted infections: fewer unintended pregnancies
- A reduction in the health inequalities gap in sexual health and blood borne viruses
- People affected by blood borne viruses lead longer, healthier lives
- Sexual relationships are free from coercion and harm
- A society where the attitudes of individuals, the public, professionals and the media in Scotland towards sexual health and blood borne viruses are positive, non-stigmatising and supportive.

1.3 The Framework also takes account of national documents in relation to HIV and BBV:

1. Healthcare Improvement Scotland published a set of standards for HIV Services in July 2011. These standards aim to improve the quality and co-ordination of HIV Care for HIV infected individuals and those at high risk of acquiring infection.
2. The Quality Indicators for Hepatitis C Services (Healthcare Improvement Scotland, April 2012) specify a minimum set of high-level measures for hepatitis C services in Scotland. These indicators cover aspects of prevention, testing and assessment, treatment and support, and service organisation.
3. CEL 29 (2012) entitled Managed Clinical Networks: Supporting and Delivering the Healthcare Quality Strategy which reiterated the Government’s commitment to the role of MCN’s
4. NICE Guidelines on Management of Chronic Hepatitis B Infection ( currently in draft and expected to be issued in April 2013)

2. NHSGGC PLANNING CONTEXT

2.1 The local context for the development sexual health and BBV services includes:

- A review of terminations to support equitable access across NHSGG&C
- Developing primary care responses to achieve a shift in the balance of routine sexual health care from Sandyford specialist services to primary care
- Carrying out and implementing a comprehensive review of Sandyford services
- Responding locally to the focus in the national framework on
  - The linkages between sexual health and parenting programmes
  - The role of addictions services in promoting better sexual health and addressing BBVs
  - The need for sensitive enquiry and work to address gender based violence
2.2 The responsibility for achieving the objectives set out in this framework is shared across the NHS system. This framework therefore includes activity where

- Sandyford specialist health services have prime responsibility (Sandyford Central and Hubs)
- Acute hospital services have direct responsibility or a key role in supporting sexual health, BBV services
- CHPs/CHCPs have direct responsibility (through the activity carried out by their staff e.g. health improvement and staff training)
- CHPs/CHCPs do not have direct control but are expected to exert influence (through working in partnership with primary care, local authorities and other community planning partners)
- Areas of work that depend on all parts of the system fulfilling their responsibilities.

2.3 Prisoners tend to come from populations that are at increased risk of sexual ill-health and blood-borne viruses. The transfer of prison healthcare to NHSGG&C will present a significant challenge for the delivery of sexual health and blood-borne virus services. There should however be opportunities for better coordination of patient care (e.g. transfer of patient data) between prisons and other parts of NHSGG&C system, with better outcomes for prisoners' health.

2.4 This planning framework takes account of the revised NHSGG&C policy frameworks, particularly in relation to health improvement and tackling inequalities.

2.5 The responsibility for reviewing and updating this Planning Framework lies with the Lead Director (Director of Corporate Policy and Planning), supported by a Lead Planner (Head of Planning and Performance, North West Sector) and the Public Health lead for Blood-Borne Viruses (Clinical Director, Public Health Protection Unit), subject to approval by the NHSGG&C Sexual Health Planning and Implementation Group which comprises representatives of key stakeholders.
## Early Intervention/Prevention
