Glasgow & Clyde Weight Management Service (GCWMS) provides an evidenced based programme using a multi component approach of dietary and activity advice supported by behavioural change to weight management. The service goal is to help individuals achieve at least a 5kg weight loss. This is based on good evidence, that 5kg is a clinically significant target that improves a range of obesity related health conditions.

Health Related Quality of Life indicators are also recorded and show significant improvement with 5kg weight loss**.

Further weight loss is supported through the programme if chosen.

GCWMS recognises the challenges of behaviour change and the chronicity of obesity and endeavours to support patients through the weight loss phase of weight management but also through the first year of weight loss maintenance.

The programme consists of three phases:

Weight loss Phase 1: Lifestyle intervention delivered over 16-weeks

Phase 2: Lifestyle intervention + pharmacotherapy +/-or structured low calorie diet delivered over 3 months & can be repeated.

Maintenance Phase 3: lifestyle intervention and maintenance strategies delivered over 12 months

Or Bariatric Surgery if indicated.

GCWMS is the only route to Bariatric Surgery in NHSGGC and is an option available if indicated after completion of the structured weight management programme.

Who can attend GCWMS?

GCWMS is part of NHSGGC whole system approach to weight management which supports prevention of overweight through to the pharmacological and surgical treatment of severe and complex obesity.

It is accessible to all residents of NHSGGC or those registered with a GP in NHSGGC. It is delivered in two adapted bases in Glasgow and Clyde and in 22 community venues across GG&C.

The clinical tier of GCWMS is accessible to adults of 18 years or more with BMI's of 35 or over, or BMI 30 or more with coexisting medical conditions.

GCWMS was piloted in two areas of Glasgow in 2006 and has been available to all of NHSGGC since October 2008.

WHATS NEW

GCWMS outcomes have been published
Attendance is key to successful weight loss
GCWMS has a Website - www.nhsggc.org.uk/gcwms

HOW THIS HELPS

- Ease of Referral
- Information available for appropriate informed referral
- Downloadable information leaflets
Phase 1 Outcome

The Phase 1 outcomes for GCWMS were evaluated and published this year in the Journal of Public Nutrition.*

- Of 2976 patients referred to the service between 2006 and 2007, 2156 (72.4%) opted into the service for assessment.
- At assessment patients are given information about the service and asked to consider if this is the right time to undertake the programme.
- Of those who embarked on and completed Phase 1 of the programme 37% lost 5kg

In Phase 2 further lifestyle support with the assistance of medication and a structured low calorie diet is offered. This encourages further weight loss and supports success in those who have not achieved the 5 kg target in Phase 1.

Who did well in Phase 1?

Gender
Males did better than females however they were less likely to be referred, opt in or complete. Those that did complete were 3 times more successful than females who completed.

Age
Those over 40 years of age did best. The age group that did least well were the 18-30 year olds.

BMI
Those with BMI greater than 50 did best.

Mood
Those with higher scores in a depression scale at initial assessment were also more likely to succeed.

Attendance
The success in all groups was strongly associated with attendance even when all other factors were taken into consideration.

What factors were associated with poorer outcomes?
Diabetes was a predictor of doing less well, as was coming from the most deprived area. Those from more deprived areas were less likely to attend or complete the programme. However, if they did complete the programme they did equally well.

Next steps

Evaluation including Phase 2 and 3 of the service will present a fuller picture of the effectiveness of the range of interventions offered in GCWMS.

Through investment in continuous improvement within GCWMS a recent audit shows just under 50 % lost at least 5kg in Phase 1.

Further improvements in overall effectiveness may be achieved through improving uptake rates of referrals, retention in the programme and targeting effective interventions to specific populations of patients.

GCWMS Website (www.nhsggc.org.uk/gcwms)

GCWMS has recently developed a website which provides further information on the service, including how to refer patients and useful links for self help. Our site also lists training opportunities and dates for health professionals.

Patient is referred by GP or Hospital doctor

Patient opts in to service and makes a choice appointment for an assessment

Assessment date & clinic venue sent with questionnaires to complete
If weight less than 120Kg seen in community or more than 120Kg seen in main base

Assessment Session
A clinical interview assessing mood, activity, dieting history and readiness to change. Patients are directed at this point to the psychological and activity intervention to match their needs.

Patient Options in (within 6 months)
1. Choose group location and placed on group waiting list
2. Offered additional physiotherapy / psychology if appropriate
3. Lettered 2 weeks prior to group starting

End of Phase 1 - Options
• Further weight loss through lifestyle, use of medication, low calorie diet or
• Maintain weight loss

16 weeks
Patient attends 9 x fortnightly group sessions of 1.5 hour Sessions include behaviour change / diet & activity discussion at each session

Discharged or referred to appropriate service

(If not achieved 5Kg weight loss)
Continue Programme using option not yet tried

MAINTENANCE
Monthly for 12 months

BARIATRIC SURGERY
• if not achieved 5Kg weight loss
• BMI > 40 no co-morbidity
• BMI > 35 + co-morbidity
• < 60 years
• maintained weight or not gained 5Kg
• Final decision by surgeon
• Criteria currently undergoing National review

Discharged and signposted to community programme re referral > 12 months
Completed Programme

Discharged and signposted to community programme re referral > 12 months
Completed Programme

MAINTENANCE
Monthly for 12 months

With or without additional Psychology

Psychology Assessment prior to group if indicated e.g. purging, excessive binging / other psychological concern
