

Core brief

Thursday, 24 August 2017

Introduction

Dr David Stewart is coming to you LIVE on Webex talking about unscheduled care.

Cross system working

Dr David Stewart, deputy medical director is giving you the opportunity to join him LIVE on Webex talking about our plans for unscheduled care in the future.

Cracking the problem of performance means identifying the problem first!

David has been working with a wide range of clinical colleagues both in our acute hospitals and in the community to analyse the issues and ultimately “crack the problem”.

He believes that more beds and more staff is simply not the answer. We need to develop a bigger menu of options as alternatives to hospital admission... and urgently deliver the aims of the 2020 vision outlined in the National Clinical Strategy for Scotland and the Health and Social Care Plan.

You can watch David present his ideas to improve unscheduled care at **2pm on Tuesday 29 August** whilst listening to him via your telephone, and you can ask questions via the online chat text box.

You can access this live presentation via the link below, using your PC, tablet or phone. We recommend you join the presentation prior to the 3pm start to allow time to make sure your device is ready for Webex. Click the link below and follow any prompts to install additional software if required.

If accessing on a work PC or laptop, you may see a box asking to make changes to your computer. Click on No to see a list of options under “Still having trouble?”. Simply click on the first option “Run a temporary application...” to proceed to the presentation.
