Patient Placement/ Assessment of Risk

Daily check (√/x)

Patient Placement

Patient isolated in a single room with en suite facilities / own commode. If a single room is not available, an IPCT risk assessment is completed daily. Stop isolation when patient is asymptomatic / back to normal respiratory function for at least 24 hours OR patient has completed a course of antiviral medication. (If patient is ventilated, seek advice from a consultant microbiologist)

Place yellow isolation sign on the door to the isolation room

Door to isolation room is closed when not in use. If for any reason this is not appropriate then an IPCT risk assessment is completed (Back page).

Hand Hygiene (HH)

All staff must use correct 6 step technique for hand washing at 5 key moments

HH facilities are offered to patient after using the toilet or during coughing/sneezing episodes and prior to mealtimes etc. (clinical wash hand basin/ wipes where applicable)

Personal Protective Clothing ( PPE)

Disposable gloves and yellow apron are worn for all direct contact with the patient and their equipment/environment, removed before leaving the isolation area and discarded as clinical waste. HH must follow removal of PPE.

Staff are wearing face protection i.e goggles/mask where there is a risk of body fluid splashing onto the face or when within 1m of patient.

Staff are wearing appropriately fitting FFP3 masks during Aerosol Generating Procedures (AGPs). (See Table 1 below for list of AGPs)

Visitors participating in patient care should be offered appropriate PPE.

Safe Management of Care Equipment

Single-use items are used where possible or equipment is dedicated to patient while in isolation.

There are no non-essential items in room. (eg. Excessive patient belongings)

Twice daily decontamination of the patient equipment by HCW is in place using 1,000 ppm solution of Actichlor Plus (or equivalent)

Safe Management of Care Environment

Twice daily clean of isolation room is completed by Domestic services, using of a solution of 1,000 ppm Actichlor Plus (or equivalent). A terminal clean will be arranged on day of discharge/ end of isolation.

Laundry and Clinical/Healthcare waste

All laundry is placed in a water soluble bag, then into a clear plastic bag (brown bag in mental health areas), then into a laundry bag

Clean linen must not be stored in the isolation room.

All waste should be disposed of in the isolation room as clinical/ Healthcare waste

Information for patients and their carers

The patient has been given information on their infection/ isolation and provided with a patient information leaflet (PIL) if available

If taking soiled clothing home, carers have been issued with a Washing Clothes at Home PIL.

(NB. Personal laundry is placed into a water soluble bag and then into a patient clothing bag before being given to carer to take home)

HCW Daily Initial :

Date Isolation commenced: ............................................................

Care Checklist completed and signed off by: .................................

Table 1

List of AGPs:
- Intubation, extubation and related procedures eg. Manual Ventilation
- Cardiopulmonary resuscitation
- Bronchoscopy
- Surgery and post mortem procedures in which high speed devices are used to open respiratory tract
- Dental procedures
- Non invasive ventilation (NIV) eg. Bi-level positive airway pressure ventilation (BIPAP), continuous positive airway pressure ventilation (CPAP)
- Hi frequency oscillatory ventilation
- Induction of sputum
